/note="Vector: pDrive Cloning Vector; RT-PCR was performed /note="Vector: pDrive Cloning Vector; RT-PCR was performed using gene-specific primers flanking the open-reading frame. PCR products were subcloned into pDrive Cloning Vector and sequenced completely using M13 forward and reverse primers. Sequencing gaps were closed by re-sequencig using primers flanking the gapped areas."

First strand cDNA synthesis was primed with a 50 bp linker primer containing an oligo dT sequence preceded by a synthetic XhoI site. 5 prime adaptors were used containing an EcoR1 cohesive end. The finished cDNAs were inserted in to the ZAP express vector unidirectionally in the sense orientation with respect to the lacZ promoter of pBK-CMV. An amplified library was prepared from approximately 3 million primary clones in the lambda ZAP Express vector. In vivo excision was then used to generate individual pBK-CMV phagemid clones for EST sequencing."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /mol_type="mRNA"

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Podsakoff, Gregory
APPLICANT: Watson, Gordon
APPLICANT: Watson, Gordon
APPLICANT: Couto, Linda B.
APPLICANT: Yang, Bin
TITLE OF INVENTION: TRECOMBINANT ADENO-ASSOCIATED VIRUS VIRIONS FOR
TITLE OF INVENTION: TREATMENT OF LYSOSOMAL DISORDERS
FILE REFERENCE: 0800-0021
CURRENT APPLICATION NUMBER: US/09/715,858
CURRENT FILING DATE: 2000-11-14
NUMBER OF SEQ ID NOS: 16
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 1
LENGTH: 1956
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: CDS
LOCATION: (1)...(1956)
